Heights Weekly Report Week of 8.17.26

Section 1

Good Afternoon-

As we finish another week, Mother nature continues to surprise us with her ever changing weather patterns. This week brought us another week with very intense heat, with little to no rain in most of our area. The team did a great job at adjusting and coping with this to complete our services. We completed the following services at your community. Weekly mowing, Line trimming, Hard edging, Blowing of all the hard surfaces, Routine shrub maintenance (where applicable) Irrigation inspections, adjustments, and repairs (where applicable) Landscape quality inspections throughout the community Agronomic inspections and monitoring for turf insects and disease. Looking ahead into next week we will continue to monitor the weather to see if we will get a break from the intense heat. And hopefully we will see some summertime rains kick back in. Irrigation & Landscape teams will continue monitoring: Irrigation system performance and coverage Turf recovery and overall plant health Insect activity, including chinch bugs, army worms, sod webworms, and mole crickets Seasonal fungal disease activity Drainage patterns and saturated soil conditions Landscape quality and overall curb appeal As a reminder, irrigation is designed to supplement natural rainfall does not replace it. Even properly functioning irrigation systems have limitations during periods of prolonged drought or when rainfall becomes inconsistent. Our irrigation and agronomic teams will continue making recommendations and adjustments as conditions evolve. Thank you for your continued partnership and trust in Impact Landscaping & Irrigation. We sincerely appreciate the opportunity to care for your community and remain committed to protecting and enhancing your landscape throughout the remainder of the summer.
